

GRADUATE SCHOOL FELLOWSHIPS AND ASSISTANTSHIPS

THE HENRY M. MACCRACKEN PROGRAM FOR DOCTORAL STUDENTS

Henry Mitchell MacCracken, a professor of philosophy, served as the sixth chancellor of NYU. As chancellor, he established one of the first graduate schools of arts and science in the United States. He was committed to expanding the university's schools and departments, improving academic standards and increasing enrollment. The GSAS doctoral fellowship program is named in honor of him and his visionary leadership.

The minimum MacCracken doctoral support package includes:

1. A four- or five-year award term.
2. A scholarship for full tuition and registration and services fees for courses required for the degree.
3. Full coverage of the premiums for mandatory NYU student health insurance for an individual under the NYU comprehensive plan.
4. A nine-month academic-year stipend for living expenses. Some departments offer either a stipend or research assistantship. For the Department of Chemistry, the stipend amount in 2017-18 is \$28,145.
5. A one-time Dean's Supplementary Fellowship Grant of \$1,000 that may be used at the student's discretion.

The Department of Chemistry can enhance the MacCracken Fellowship with other features, such as the dean's supplement reserved for historically underrepresented minority groups. Students who receive funding from an external agency also are awarded the MacCracken award, if necessary, to ensure they receive an award package with full funding.

The Department of Chemistry also offers their students the opportunity to teach as an adjunct instructor during the course of their studies. If students teach, the compensation is provided in addition to the MacCracken fellowship package, and not as part of it.
