Taught by a leading expert on environmental pollution and its human health effects:
Professor George Thurston
NYU School of Medicine

Pollution in the air we breathe and in the water & food we consume have been identified by the World Health Organization as major human health threats around the globe.

Course covers the basic concepts of environmental health, including pollutant sources, fate, and impacts in environmental media (air, water, food, and soil) and occupational settings, in the context of today’s environmental controversies, such as fracking and climate change.

Tuesdays, Spring Semester 2018: 2 PM-4:45 PM
(Open to Grad Students, or 3rd or 4th Year Undergraduates with permission)
