CASE SEMINAR: USING WINNICOTT IN THE CLINICAL SETTING
PDPSA 4581. FALL 2021

The course will draw on case presentations and clinically focused readings to study aspects of therapeutic process developed in the work of D. W. Winnicott. This will include Winnicott's understanding of:

- Holding in early development and the analytic setting
- Fostering a sense of being and feeling real vs. a sense of futility and feeling unreal
- Working with primary anxieties (falling to pieces, falling forever) and early defenses (splitting of the ego, false-self, premature ego-development)
- Regression to dependence
- Relating to subjective objects and problems in the transition to external reality

We will learn about these and related aspects of therapeutic process directly as they come up in continuous case presentations by candidates and other examples from our clinical work. We will emphasize raising questions and open discussion of clinical experience. Winnicott's approach involved spontaneity, intuition, and discovery, making his work relevant and accessible at all levels of clinical experience.

* Additional readings suggested but not required
